- Milestone 3 - Job Information Backend

Login Form

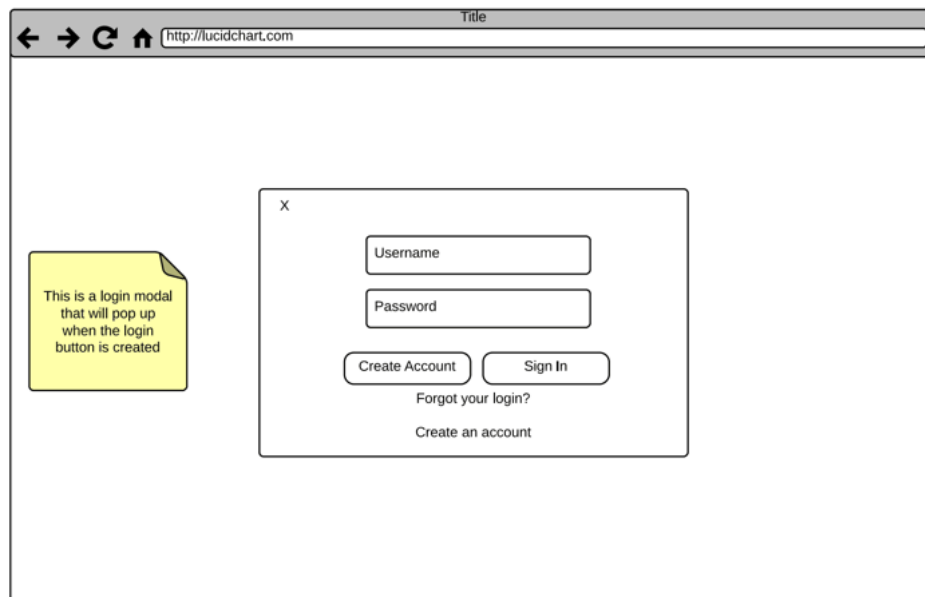

Milestone 1 - Login Modal

Section: GUI

Assignee: TBD

High Level Overview: Build and Implemented Login Modal form.

Goal: Build login modal form. Form will gray out screen when login is clicked and modal will center on page. Modal logic implemented with Javascript and will be bound to a class login so any object with class login will cause the login modal to display. Example displayed below.

Milestone 2 - Login DB

Section: DB

Assignee: TBD

High Level Overview: Create a table to contain login information in the database

Goal: TBD

Milestone 3 - Login Middleware

Section: GUI

Assignee: TBD

High Level Overview: Implement Javascript Middleware to send information to server

Goal: Send a HTTP post request with login information to the SLIM PHP framework url. On success, a request will return the account information for the user, and a user ID. Login button will be replaced with a logout button and the users name in the website

Milestone 4 - Login Backend

Section: DB

Assignee: TBD

High Level Overview: Write PHP (using slim) to handle HTTP request and query DB

Goal:

New Account Form

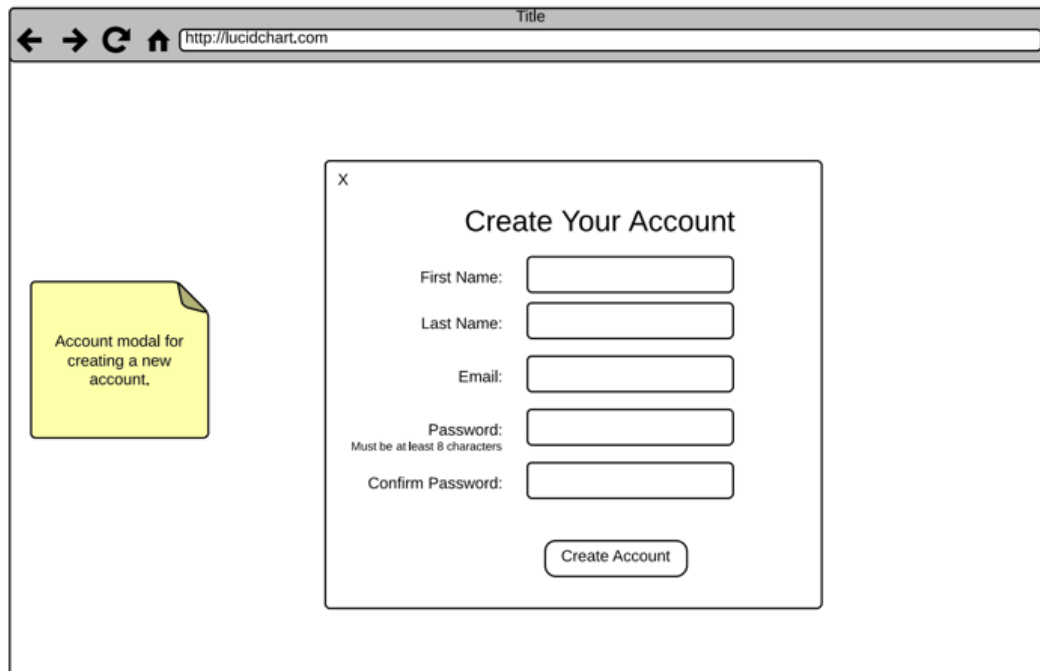

Milestone 1 - New Account Modal

Section: GUI

Assignee: TBD

High Level Overview: Build and Implemented account form to create a new account

Goal: Build account creation form. Form will gray out screen when create account is clicked and modal will center on page. Modal logic implemented with Javascript and will be bound to a class 'createAccount' so any object with the given class will cause the account Creation modal to display. Example displayed below.

The screenshot shows a web browser window with the address bar displaying 'http://lucidchart.com'. The browser title is 'Title'. The main content area features a modal form titled 'Create Your Account' with a close button (X) in the top left corner. The form contains the following fields and labels:

- First Name:
- Last Name:
- Email:
- Password:
Must be at least 8 characters
- Confirm Password:

At the bottom of the form is a 'Create Account' button. To the left of the modal, there is a yellow sticky note with the text: 'Account modal for creating a new account.'

Milestone 2 - New Account DB

Section: DB

Assignee: TBD

High Level Overview: Create a table to contain account information in the database

Goal: TBD

Milestone 3 - New Account Middleware

Section: DB

Assignee: TBD

High Level Overview: Implement Javascript Middleware to send information to server

Goal: Send a HTTP post request with login information to the SLIM PHP framework url. On success, no information will be returned.

Milestone 4 - New Account Backend

Section: DB

Assignee: TBD

High Level Overview: Write PHP backend (using slim) to handle HTTP request and query DB

Goal: TBD

Navigation Bar

Milestone 1 - Navigation Bar

Section: GUI

Assignee: TBD

High Level Overview: Build navigation bar component to be included on each page

Goal: Navigation bar will link to skeleton pages and will have options for Home, Post a Job, My Jobs, and My Account

Milestone 2 - Skeleton Pages

Section: GUI

Assignee: TBD

High Level Overview: Implement skeleton pages to link navigation bar to

Goal: Skeleton pages will be blank pages to demonstrate flow of the website. The pages will render a navigation bar so a user can return to a previous section on the website.

Styling

Milestone 1 - Grid System

Section: GUI

Assignee: TBD

High Level Overview: Build a CSS Grid System to handle box placement

Goal: Build a CSS Grid System so column classes can be assigned to boxes on website to simplify placement and development of website pages

Job Creation Form

Milestone 1 - Job Creation Modal

Milestone 2 - Job Database

Section: DB

Assignee: TBD

High Level Overview: Create a table to

Section: GUI

Assignee: TBD

High Level Overview: Build and Implemented Job Creation Modal

Goal: Build job creation modal form. Form will gray out screen when login is clicked and modal will center on page. Modal logic implemented with Javascript and will be bound to a class 'jobCreation' so any object with class 'jobCreation' will cause the login modal to display. Example displayed below.

The screenshot shows a web browser window with the address bar displaying 'http://helpmeout.com'. A modal form is centered on the page. The modal has a title bar with an 'X' icon. It contains the following fields and controls:

- Category: A dropdown menu with 'Food' selected.
- Job Description: A text input field.
- Payment Amount: A text input field with '\$5.00'.
- Meeting Location: A text input field.
- Timeframe: Two radio buttons, 'Set Timeframe' and 'No Timeframe', with 'No Timeframe' selected.
- Deadline Date: A date picker showing '1/1/10'.
- Deadline Time: A time picker showing '4:30'.
- Notes: Two radio buttons, 'Notes' and 'No Notes', with 'No Notes' selected.
- Negotiable: Two radio buttons, 'Negotiable' and 'Not Negotiable', with 'Negotiable' selected.
- Buttons: 'Submit' and 'Cancel' buttons at the bottom.

A yellow sticky note on the left side of the modal says: 'This is the modal over lay for the job posting interface'.

contain job form

information in the database

Goal: TBD

Milestone 3 - Job Middleware

Section: GUI

Assignee: TBD

High Level Overview: Implement Javascript Middleware to send information to server

Goal: Send a HTTP post request with job information to the SLIM PHP framework url. On success, a request will return the account information for the user, and a user ID.

Milestone 4 - Job Backend

Section: DB

Assignee: TBD

High Level Overview: Write PHP (using slim) to handle HTTP request and query DB

Goal:

Home Page

Milestone 1 - Skeleton Containers

Section: GUI

Assignee: TBD

High Level Overview: Create skeleton containers that displays all jobs currently available

Goal: Create placement areas for the new jobs so that we can display the jobs in our database.

Milestone 2 - Job Request Backend

Section: DB

Assignee: TBD

High Level Overview: Backend functionality to allow for query of available jobs. Returns as JSON object with job information to be displayed (Job Name, Cost, Icon, Drop off location)

Goal: TBD

Milestone 3 - Javascript Frontend

Section: GUI

Assignee: TBD

High Level Overview: Build Javascript front end to request and populate homepage with available jobs.

Goal: TBD

Milestone 4 - Job Information Functionality

Section: GUI

Assignee: TBD

High Level Overview: Make Jobs clickable and display information.

Goal: TBD

Job Information Modal

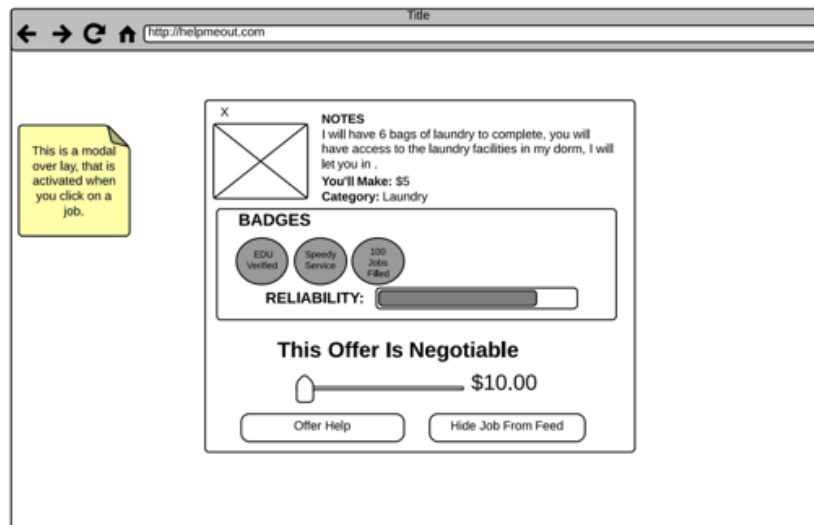

Milestone 1 - Job Information Modal

Section: GUI

Assignee: TBD

High Level Overview: Build and Implemented Job Information Modal

Goal: Build job information modal . Form will gray out screen when login is clicked and modal will center on page. Modal logic implemented with Javascript and will be bound to a class 'job' so any object with class login will cause the login modal to display. Example displayed below.

Milestone 2 - Job Information Middleware

Section: GUI

Assignee: TBD

High Level Overview: Build Javascript Middleware to request job information

Goal: TBD

Milestone 3 - Job Information Backend

Section: DB

Assignee: TBD

High Level Overview: Write PHP (using slim) to handle HTTP request and query Database

Goal:
